Summary of our services:

The South Texas OCD Clinic is scheduled to open in 2015. All of our clinicians are BTIT graduates. The clinic is close to downtown and easily accessible. We offer treatment in our office and in the community. We provide extensive after-care for our graduates by way of support groups and periodic check-ins.

Treatment Planning Process

After a thorough intake assessment, the clinical team works in concert with our clients to create a custom-designed treatment plan to fit the needs of the individual person.

Core Treatment Components

We use exposure and response prevention, a research-based empirically proven cognitive behavioral therapy technique. We also provide individual and group therapy.

Parents, Family Members, Friends, Teachers, etc. Involvement

Based on the individual's needs, we involve all parties who may be beneficial to the treatment of the person such as family members. For our adolescent clients we also work with the client's school to provide appropriate accommodations.

Treatment of Co-Morbid Disorders

We treat OCD and related disorders.

Individual Therapy

Our program is formatted for clients to meet with their therapist individually on a daily basis as well as with behavior therapists. Meetings are held Friday through Monday for six hours each day in an effort to limit interruption of work/school schedules.

Length of Stay

Typical length of stay is 2-4 weeks. Treatment is tailored to meet the individual's needs.

“Census” (i.e., the maximum number of clients seen at any given time)

Our census is currently 2 clients.

Other Resources for Outpatients

Support groups.
